

Threat Classification Table:

No.	Threat	Target	Impact	Prevention
1	Phishing	Individuals, employees, email users	Steals passwords, banking details, and other sensitive information	Avoid suspicious links and attachments, verify senders, and use email security tools
2	Malware	Computers, smartphones, networks	Can damage systems, steal data, or provide unauthorized access	Use antivirus software, keep systems updated, and avoid downloading files from unknown sources
3	Ransomware	Individuals, companies, servers, and organizations	Encrypts files and prevents users from accessing their data	Maintain regular backups, update software, and use endpoint security
4	Social Engineering	Employees and individuals	Tricks people into revealing confidential information or performing unsafe actions	Provide security awareness training and verify unusual requests
5	Credential Theft	User accounts and login credentials	Attackers can gain unauthorized access to accounts and systems	Use strong unique passwords and enable multi-factor authentication
6	DDoS Attack	Websites, servers, and online services	Makes services unavailable to legitimate users	Use DDoS protection, firewalls, traffic filtering, and redundant systems
7	SQL Injection	Websites and databases	Can allow attackers to access, modify, or delete database information	Use parameterized queries, input validation, and secure database practices
8	Man-in-the-Middle Attack	Network communications and users	Attackers may intercept or modify information being transmitted	Use HTTPS, encryption, secure Wi-Fi, and VPNs where appropriate
9	Insider Threat	Organizational data and systems	Authorized users may intentionally or accidentally expose sensitive information	Apply access controls, monitor activity, and provide employee security training
10	Zero-Day Attack	Vulnerable software and systems	Exploits an unknown or unpatched vulnerability before a fix is available	Apply security updates quickly, use endpoint protection, and
